

Mapping Meaning

Maps in the Classroom: So Much More Than Geography

Presented by the Norman B. Leventhal Map Center at the Boston Public Library

How do maps tell stories? How can we use the process of mapping a place, an idea, or an experience to help students see the world in new ways? Mapping Meaning explores the many ways maps help us understand our world. This will be a day of exploration and creativity where participants will make their own maps to explore the almost infinite possibilities of mapmaking. How would you map the sounds or smells of Copley square? How would you think about the psychogeography of the inside of a busy library? Join educators Doug Healy and Alison Safford for a day to stretch your creative muscles and take away ideas to use in any classroom connected to the power of maps and visuals.

WORKSHOP DETAILS

WHEN	Saturday, May 13, 9 am—3 pm
